

ALERTS

REMINDERS FROM YOUR ACCOUNT TO YOU

Alerts are easy reminders to keep you informed of specific activity on your Dakota West accounts. Whether providing you with notifications of security changes or letting you know that a transaction is processing to your account, alerts can help you review activity on your account.

First, configure your alert preferences by logging into your online access, and find Alerts under the Personalization section of the [Settings](#) menu. Choose from Email or SMS (text) alerts. Even though an email is always required to set up an online account, you may choose which method best suits your needs for each type of alert.

CONTROLLING ACCESS TO YOUR INFORMATION

Security alerts may be set to protect your personal information used to access your accounts. This can include notifying you to changes to your email address, your PIN, your passwords, or even changes to alerts you already have set.

TRACKING INCOMING AND OUTGOING FUNDS

Account settings may be applied to each account. These alerts advise you of specific balances, credit transactions, and debit transactions based on the dollar amount you select. Any option that features a dollar amount in blue text requires you to set the level at which you prefer to receive an alert.

MY CARDS ALERTS PROTECT YOUR DEBIT AND CREDIT CARDS

The [MY Cards mobile app](#) provides you with direct control over the activity on your Dakota West Mastercard® Debit and Credit Cards. In addition to the [card security services](#) provided to Dakota West cardholders, the MY Cards app allows you additional real-time alerts when a card transaction occurs, based on the alerts you set within the app.

Like the account alerts, notifications may be created for each Dakota West card so you may create separate alerts for debit cards or credit cards. These alerts can be sent to the device of your choice, plus a list of recent notifications appear in the app so you can reference recent charges. You can change alerts as easily as you set them so you can adapt your notifications depending on your spending needs.
